

MINEFIELD

THE POINT OF THIS GAME IS TO
CROSS A MINEFIELD. YOU HAVE A MINE
DETECTOR WHICH GIVES SOME WARNING
OF DISASTER. BUT WILL NOT
GIVE EXACT MINE LOCATIONS.
BE CAREFUL FOLKS OR :c

K A P O W!!

STARTING POSITION IS THE TOP LEFT
AND FINISH (IF YOU'RE LUCKY) AT THE
BOTTOM RIGHT CORNER.

7 8 9

4 6

1 2 3

PRESS ANY KEY TO EXPLODE.

DESCRIPTION

This is a version of Minefield adapted from one originally written for the Pet. The idea is to cross the minefield avoiding the hidden mines. The game starts with 20 mines in the field, increasing each game. The keys to move are 1, 2, 3, 4, 6, 7, 8 and 9.

RUNNING THE PROGRAM

First the screen displays the instructions, and then the game starts. The player starts at the top left of the field and a successful crossing should end at the bottom left of the field. There are clues as to where the mines are: if any mines are within two moves of the player a message is displayed to tell the player how many mines there are and within how many moves.

PROGRAM STRUCTURE

Line 60 sets the screen and border colours.

Line 70 sets MI to 20: the initial number of mines in the field.

Line 80 initialises a matrix SC\$.

Line 90 jumps to the instructions.

Lines 100 - 140 set up two loops to read the character for the minefield into the matrix.

Lines 160 - 200 set up the twenty mines and put them into the matrix at random positions.

Lines 210 - 220 ensure that the top left and bottom right positions of the minefield are not occupied with mines.

Lines 230 - 250 print the title and the number of mines currently in the field.

Line 270 - 420 draw the minefield on the screen, but not the mines.

Line 400 jumps to the routine to check for mines in the vicinity.

Line 430 waits for a key press.

Line 440 converts the key press into a numeric value.

Line 450 checks the key press is within limits.

Line 460 branches to move the player.

Lines 470 - 610 contain the routines to move in various directions.

Line 700 - 740 check for mines in the vicinity of the player.

Line 790 - 820 are the routine for a successful game.

Line 840 - 970 are the explosion and start again routine.

Line 1130 - 1270 check the mines and display messages.

Line 1360 - 1560 contain the instructions.
